

# Perform a Magic Trick Using a Dollar Bill

Tell someone, "Take out a dollar bill and look at the seal at the left side of the front. I can tell you the letter that is inside of this seal!"

"I can tell you the letter that is inside of the seal!"

Have the person fold a bill as shown, and then give it to you. Tell them to fold it so that the last three or four numbers of the serial number on the right side of the bill are showing.

*In this example there are three numbers showing.*

"Fold the bill so just the last three or four numbers of the serial number on the right side of the bill are showing"

Using the example bill shown, you would guess the letter “J”

The trick is that the serial numbers have nothing to do with your trick, but that fools them and keeps them off track!

The clue is to look at the numbers shown inside the circles in the photo at the right.

The number corresponds to the letter of the alphabet of the letter inside the seal.

- 1 = A
- 2 = B
- 3 = C and so on.

In this example, 10 corresponds to “J”

Next time you do the trick say, “Ok. Make it really tough. Now fold the bill so that only one number is showing!”

Make it look like you are working hard.

Have Fun!

“Umm. This one is tough!  
Let’s see... It is a “J”.

“Ok. Now make it **really** tough. I hope I can do this... Fold the next bill so that just the last number is showing...”
